

CLAIMS

1. A flexible cutting group for bush-cutters, for cutting and shredding grasses and shrubs, comprising an anchor plate (1) equipped at the centre with a hole (2) for its fastening to the rotating motorized group of the bush-cutter and with fastening means (3) distributed around its edge in a symmetrical way, characterized by pieces of metal chain (4), intended to operate as cutting and shredding means, each one, at one of its ends, in a removable way to one of the said fastening means (3),
2. The flexible cutting group, as claimed in claim 1, comprising an anchor plate (1) with a plurality of arms (5) aimed in a radial direction with respect to the centre of the anchor hole (2) and distributed symmetrically, characterized by the fact that each of said arms (5) has near its end, a means (3) for fastening in a removable way, a piece of steel chain (4).
3. The flexible cutting group, as claimed in claim 1, characterized by the fact that each arm (5) is equipped, near its end, with a hole (7) for the removable anchoring of a piece of chain (4).
4. The flexible cutting group, as claimed in claim 1, characterized by the fact that the fastening means (3) are constituted each of a bolt (8) with the relative nut.
5. The flexible cutting group, as claimed in claim 1, characterized by the fact that the flexible cutting means are constituted by pieces of steel chain (4) of the "cable chain" type with elongated links.
6. The flexible cutting group, as claimed in claim 1, characterized by the fact that the pieces of chain (4), which make up the flexible cutting and

shredding means, are equal one to other, in length and shape, and each of them has a length between 8 and 30 cm.

7. The flexible cutting group, as claimed in claim 1, characterized by the fact that the pieces of chain (4), that make up the flexible cutting and shredding means, are equal one to the other, in length and shape, and each of them has a length of about 15 cm.
